

1. All visualizations and documentation are very well done. Documentation is very detailed with references included.
2. I liked the idea of colors fading as mouse is moved over. Overall, it is an outstanding piece of visualization.
3. There is no lie- factor. Data-ink ratio & data-density is appropriate for this assignment.

Few suggestions and observations:

4. The bar chart symbol, the needs to be clicked to generate chart, next to search text box should have been placed on right side instead of left side.
5. The feature, bars jumping to reach the count value, is good. However, at time bar graph does not show correct values. Please see an example screenshot below.

5. It seems there is some problem with sort functionality. Please see screenshot below:

Letter frequencies in "testing again"
